LIVING LAB TOOLKIT · OPEN SAMPLE · 05

Before/After Societal Readiness Sheet

A simple way to show what stakeholder input changed. Rate societal readiness before and after a Living Lab cycle, and record the evidence for each rating.

How to use this sample

Uses the nine-level Societal Readiness Level (SRL) scale, originally developed by Innovation Fund Denmark. Agree the rating as a team and write down the evidence: a rating without evidence is an opinion.

This is a generic open sample. The licensed Good Tech instruments (Ethical Gate procedures, ethical risk screening, readiness-triad assessment) are delivered in a pilot with Good Tech or through a GoodTech virtual Living Lab.

1. The SRL scale (summary)

SRL	Meaning
1	Problem identified; societal readiness for a solution assessed
2	Problem, proposed solution and potential impact formulated
3	Initial testing of the proposed solution with relevant stakeholders
4	Problem validated through pilot testing in a relevant environment
5	Proposed solution validated, now by relevant stakeholders in the area
6	Solution demonstrated in a relevant environment with stakeholders, to gain initial feedback on impact
7	Solution refined and, if needed, retested with relevant stakeholders
8	Solution and plan for societal adaptation complete and qualified
9	Solution proven in its relevant societal environment

2. Rating

Project / solution	
Living Lab cycle and dates	
Rated by	

	Before the cycle	After the cycle
SRL (1–9)		
Evidence for the rating		
Stakeholder groups consulted		

3. What changed because of stakeholder input

Input (who said or showed what)	Change made to the solution or plan	Effect on readiness

4. What would move it up one level

Next step	Owner	By when
